Hey, Jim. The operative word would be "may". As you know, I'm not far enough up the food chain to commit EPA to doing anything.

My guess is that it would depend on what is found, how much, how nasty, etc. I don't think there is a specific time limit. I think it would depend on the circumstances as they occur. For example, if there was a significant source of contamination presenting an imminent threat and we were able to obtain access, I think my managers would be amenable to us returning.

I assume that as you guys and Ecology proceed, you will occasionally uncover stuff that will need to be dealt with. I don't think that would surprise anyone. Ecology and King County made a good case for EPA involvement before. If the situation warrants our involvement again, I suggest you make your case, and my managers will make their decision.

Thanks Jeff! You mentioned in previous email that EPA may be able to assist with some additional soil removal if debris can be removed. Does that offer still stand, and if so what date approximately would be the cutoff for availability of that assistance?
Thanks again- Jim

FYI, EPA's final demobilization from the Pillon property occurred August 8, 2019.

Wishing the best of luck to Ecology and King County.

Thanks, everyone.

Attached is a Pollution Report (POLREP) regarding:

USEPA Region X
May Creek Removal
15753 Renton-Issaquah Road, Renton, WA
